

## Policy for protection of the transactional data

In order to protect you from possible misuse when paying with your VISA or MasterCard, we're offering the best practices, recommended by the international card organizations.

- The protection during inserting and transferring the card data is secured by SSL protocol for crypting the connection between our server and the payment page of the bank which services we're using.
- The authenticity of your card is checked through using your security code at the back of the card CVV2);
- In addition, in order to identify you as a cardholder the payment server for e-commerce of the bank which services we're using supports the schemes for authentication of the international card organisations - Verified by VISA and MasterCard SecureCode - in case you have a registration and are able to use them.
